IMPORTANT FACTORS IN GOOD FARMING

Report of O. A. C. and Federal Expert Shows Good and Bad Practices

Size of farm, number of cows, receipts per cow, returns for \$100 worth of feed, number and quality of cows, and returns per acre, are factors that have great influence on the success of dairy farming. These factors indeed determined the success and failure of farming operations on fifty-three homestead farms recently analyzed by the representative of the Oregon Agricultural college extension service.

Of these various factors it is shown that the most important are receipts per cow and returns for \$100 worth of feed. The farmer's profit is measured in the report by the size of the labor income. By labor income is meant what the farmer has left after paying all farm expenses including depreciation of farm buildings and machinery, taxes, feed and labor, and deducting five per cent interest on the value of the land, buildings, stock, tools and other investments. The labor income is what a farmer gets for his own work in addition to what the farm furnished toward the family living.

The labor income on these fifty-seven homestead farms ranged from minus \$1.15 to \$3.24. In other words some of the farms failed to pay their owners anything for their labor and did not pay five per cent interest on investment. Other farms under similar conditions paid the owner five per cent on investment and also \$3.24 for his labor.

Concerning size of farm the report shows that those farmers were not successful who did not have enough land to keep the farmer and his family or hired help profitably employed. The labor income on farms averaging thirty-four acres was \$3.20 and the labor income on farms averaging one hundred and nine acres was \$4.71.

A second reason for variations in the quality of cows kept. With an average of twenty cows to the farm the labor income was \$2.74, while with an average of forty cows the income was \$3.24. The quality of cows kept, as before mentioned, was one of the most important causes of variation. Farm investments in which cows averaged \$62 per head returns leaves a labor income of minus \$1.23. Where cows gave an average return of \$1 per head the labor income was \$2.93. This shows an average advantage of more than \$400 due to the better quality of cows.

Another consideration, even more important, is the value of the return on animal gives for \$100 worth of feed. If stock returned an average of \$113 for each \$100 worth of feed given the labor income was minus \$1.22 but where the stock returned the value of \$151 the labor income averaged \$5.53.

It is shown by the next two tables that the large herds of better cows averaged a much larger labor income. Indeed the small herd of high producing cows made nearly three times as large a labor income as large herds of low producing cows, and eighteen times as much as the small herd of low producing cows.

Better labor income was secured on farms with high returns per acre but not too high. The average labor income on farms returning values of thirty dollars per acre was minus \$2.00 on those averaging \$45 per acre \$5.71 and on those returning \$65 or more per acre \$5.38. It seems that when returns reach much above \$40 an acre the expense necessary to secure them is so great that profits decrease.

The owner of each farm surveyed is furnished a copy of these tables together with explanatory comment and blank forms wherein he may enter his various items for comparison with the average. In this way it is thought that each farmer will learn wherein success and failure lie, and manage his farm operations accordingly.

Gale Rages Over Illinois, Indiana and Great Lakes

(Continued From Page One.)

night, a terrific gale damaged several cities, demolished farm houses and uprooted trees. Telegraph service was demoralized. Menageries from affected points today indicated that there may have been loss of life at Logansport.

Heavy Snowstorm

Detroit, Mich., Mar. 22.—Trains and interurban cars were delayed today by one of the heaviest snowstorms in years.

Many Hurt at Logansport.

Logansport, Ind., Mar. 22.—W. J. Ricketts was killed in his home here when the roof of a broom factory was blown off and hurled against his residence. Many have been injured in Logansport and adjacent territory. The loss will run into thousands of dollars.

Houses Unroofed, Girl Killed.

Muncie, Ind., Mar. 22.—A girl is reported to have been killed near Montpelier by the gale which swept parts of Indiana early today. Business places were unroofed. Shingles were ripped off the Christian church.

Beaverville on Fire.

Kankakee, Ill., Mar. 22.—Beaverville near here, was afire in eight places this afternoon as a result of a gale and electrical storm following a blizzard. Three persons were hurt, four seriously.

One Burned to Death.

Logansport, Ind., Mar. 22.—Charles Wilson, aged 21, was burned to death in the wreckage of his home here today as his parents pulled at his hands trying to extricate him from the debris.

COCOANUT OIL FINE
FOR WASHING HAIR

If you want to keep your hair in good condition, be careful what you wash it with.

Most soaps and prepared shampoos contain too much alkali. This dries the scalp, makes the hair brittle, and is very harmful. Just plain modified coconut oil (which is pure and entirely germless), is much better than the most expensive soap or anything else you can use for shampooing, as this can't possibly injure the hair.

Simply moisten your hair with water and rub it in. One or two teaspoons will make an abundance of rich, creamy lather, and cleanses the hair and scalp thoroughly. The lather rinses out easily, and removes every particle of dust, dirt, dandruff and excessive oil. The hair dries quickly and evenly, and leaves it fine and silky, bright, fluffy and easy to manage.

You can get unimpaired coconut oil at most any drug store. It is very cheap, and in a few ounces is enough to last everyone in the family for months.

Stomachs are open to and the indications are that spring is here, the average man and woman who is not living in a flat, will naturally begin thinking of early spring radishes, onions and other vegetables that can be grown at the cost of a package of seed and considerable gymnastic work—morning and evening.

And to the average man and woman, gardening is just as much a part of life as going to church, coming home at night and feeding the chickens, and many other household duties.

For those who do not know it all and are willing to learn, the public library has prepared a special shelf of books. In this age of efficiency, even the old folks are beginning to recognize that occasionally the man who writes a book has a few new ideas.

Not only is there a special shelf at the library filled with hints on gardening, but there may be found several books of interest on roses and how to grow them. One book treats especially of roses in Portland and how to grow them, and naturally what applies to Portland is good enough for Salem. Portland is not the only rose city in the world. Another book, entitled "Flowers and How to Grow Them," may be found at the library.

Mrs. Sweeney has recently prepared a book mark on which is printed a list of 18 books of interest to those who have a garden and are also interested in flowers.

When a friend makes you a present of a book, never make the mistake of waiting to read it before acknowledging the receipt of the gift.

Call of the "Garden Sass" Is Heard In the Land
